

« Dive into your data »

GALION Business Intelligence Web Pack (GBIWP) includes itself in automotive suppliers' processes. It offers support functions for strategic management in order to control the performance of the processes and analyze carefully the areas of improvement.

The module offers the means to analyze and compare data between the major branches of the ERP.

The possible overlap with external data sources is one of the main advantages of this solution.

Goals

- To have the best possible information to make the right decisions at the right time.
- To improve the performance of the company.
- To have indicators on different supports.

Use

Interrogation of data from the workstation with a single mouse click.

Graphic and intuitive browsing without request.

Possibility of applying calculation formulae on data.

Backup of data and updating of the analyses (monthly-updated reports).

Analyses and indicators are available through the WEB portal.

Analysis

The graphical interface offers to users total freedom to analyze to the most detailed level. Diverse displays of information (tables, charts, maps, etc.).

Browsing functionalities still operative in graphic and cartographic modes. Edition of analysis reports.

Basic models are provided and available for each functional area covered by GALION Automotive. Users can store, share and repeat the analyses they have made as they wish by storing them. Storage of analyses in PDF for easier transmission.

Six good reasons to adopt it

- ➔ Packaged business analyses
- ➔ Effective persuasion tool
- ➔ Quick implementation and cost
- ➔ Easy to use – Two days are enough to get started
- ➔ Cross-examination and multi-domain comparisons
- ➔ Updating of results at the request
